Globopack LLP

Production of plastic packaging for goods

68A Spasskaya Street, Almaty

+7 (727) 232 80 02

sabit_globopack@mail.ru

Company profile

The production enterprise **Globopak LLP**, as part of the project to create modern flexible packaging materials, has introduced modern high-performance equipment of leading packaging companies. A whole complex of modern equipment allows us to produce various packaging materials, both on a polymer basis, and on the basis of aluminum foil and paper, with the use of unique multi-layer materials (laminates), developed according to customer requirements, for all types of products. Printing is the first and most important part of your sales strategy. Most of the costs and planning are related to choosing the best way to print the package. Solutions of this kind are at the center of the print information industry. Deep printing is recognized as the leading means of obtaining printed information. It is used to provide a rich color scheme. The advantages of gravure printing are most obvious when it comes to large print runs, color stability, and high image quality. Packaging customers choose to use gravure printing to meet their specific needs. This printing technology provides high quality printing for a wide variety of materials

www.e-okeana.kz

Company profile

Kolobok & Co LLP was established in 2001. It was engaged in the production of semi-finished food products under the brand name **Kolobok** LLP until 2006. Since 2006, after re-equipping the production, Algin caviar began to produce products under the brand "USEFUL PRODUCTS" from sodium Alginate (extract from seaweed "Laminaria") in the form of imitation caviar of valuable fish species (red and black caviar). This product is well established in the market of Kazakhstan. This product is sold in all retail outlets both in Almaty and in the whole Republic. The company has repeatedly participated with this product at international food exhibitions both in Kazakhstan and abroad (Republic of Belarus, Kyrgyz Republic). In 2012, we rebranded and now the company produces products under the trademark "OCEAN ENERGY", patented by our company in the patent office

www.alina.kz

aigul@alina.kz

Company profile

AlinEX brand appeared on the market in 1996, and since then it has been the undisputed leader and legislator of quality standards in the dry building mixes sector in Kazakhstan. According to statistics, 7 out of 10 apartments use construction and finishing materials from **AlinEX**. For many years, **AlinEX** regularly supplies the brand's products to the largest players in the construction market: corporations such as Basis-A, Global, BI-Group, etc. **AlinEX** products were used in many architectural structures that became business cards of the cities of Kazakhstan and Kyrgyzstan - Almaty, Astana, Bishkek, Shymkent, Ust-Kamenogorsk, Uralsk and others. AlinEX from the Industrial Group "Alina" has become synonymous with dry building mixes in Kazakhstan, a brand that has created a new language for the industry. Today, "glatt" and "finish" or "finishka" (from AlinEX GLATT and FINISH products) are complex definitions of entire product lines. "Alinovskoe quality" is the definition of the quality standard of the highest level. The verb "zaalinxit" is a neologism that is widely used in the professional environment of the construction and finishing segment. **AlinEX** is one of the TOP 10 buyers from the world's largest chemical manufacturers ASHLAND, WACKER, and MOMENTIVE. The laboratories use devices from leading European manufacturers. **AlinEX** cooperates in the development with the scientific centers AQUALON Duesseldorf, Dordrecht, Holland, Momentiv Paris, MGSU Moscow, STC WACKER Moscow, etc

FIDELIS GLOBAL LLP

Production of plastic and aluminum profiles, windows, pipes and fittings

Company profile

The Galaksi Group company was founded in 1993, with the purpose of investing in the production of Central Asian countries. The company's main business is related to the production of plastic and aluminum profiles, windows, pipes and fittings. The company confidently conducts its business in the market of Kazakhstan. The head office and production facilities are located in Almaty. Most foreign investors came to Kazakhstan after the country gained independence and became a stable Republic. "Galaksi Group" opened its business in difficult times for the country, during the first years it was very difficult to conduct business in a young Republic, and everyone remembers this.

"Galaksi Group" started its business in Kazakhstan as a distributor of FMC. In 1996, the company imported all products from other countries: Turkey, Germany, China. But then I decided that instead of importing materials, they can be produced here, and changed my strategic plans, directing investment in the development of production in Kazakhstan with world quality standards. This idea has found support in the strategy Kazakhstan 2030, aimed at the production of construction materials for the reconstruction of previous and implementation of new projects

Rakhat JSC

Confectionery

Company profile

It was found in 1942 on the basis of the workshops of the Alma-ata distillery and the Moscow confectionery factories named after Babayev and Rot Front. It produces chocolate products, caramel, cookies, waffles, Oriental sweets, marshmallows, marmalade and other products. In 1965, the factory began the reconstruction and expansion of a number of workshops of the main production, in 1967 the biscuit shop was put into operation, and in 1980 - the shop for processing cocoa beans and producing chocolate products (the design capacity of 12.7 thousand tons of products per year). In 1982, the level of labor mechanization was 64.8%, including 71.5% in the main production shops and 47.9% in the auxiliary service areas.

Before the collapse of the USSR, the factory was part of the state association "Confectionery" of the Ministry of food industry of the Kazakh SSR. In 1992, as a result of privatization, it was transferred from state to private ownership and transformed into a joint-stock company. Currently, the factory's assortment consists of more than 250 items of various confectionery products belonging to 10 different groups. Plant of soft drinks VISIT LLP

Production of mineral waters and other soft drinks

Company profile

Plant of soft drinks VISIT LLP Course on the naturalness and usefulness of drinks —this global trend is rapidly gaining momentum in Kazakhstan. Today, the consumer no longer just wants to quench their thirst, but also wants to get well at the same time. The relatively young Kazakhstan market of soft drinks is a kind of wild field where most of the dubious companies graze and try to arouse the confidence of the population with an abundance of preservatives. But only producers who respect their consumers survive here. Having carefully analyzed the needs of the population, we have expanded our product range without changing our main principle —the constant improvement of the taste and quality of beverages. By the 80th anniversary of our company, we have reached a qualitatively new level in the production of soft drinks

PenoPlex LLP

Production of thermal insulating materials

Company profile

PenoPlex LLP produces and sales efficient modern thermal insulation for facilities of civil, industrial, infrastructure construction - extruded polystyrene foam PenoPlex®. The company has a range of plates of various sizes for private and professional applications. Due to excellent operational performance, extruded polystyrene foam (XPS) is widely used in construction of public, industrial and private buildings, sports, agricultural and other facilities. Also the material is in demand for insulation of pipelines, used as a basis for the construction of highways, railways, runways. XPS PenoPlex® is manufactured by extrusion with foaming. During the melting of polystyrene granules, a gaseous foamer is injected into the extruder, and the material gets a set of closed small cells. This structure significantly increases the thermal insulation properties. The molten mass is formed into a large layer at the output of extruder. Upon cooling, it is cut to plates of needed sizes, up to large sheets with length of 2400 mm and thickness up to 150 mm. Plates are securely glued together to make thick blocks of 1000mm.

MAKWOOL LLP

Production of thermal insulating materials

Company profile

The largest enterprise for production of thermal insulation materials on the basis of basaltic rocks of MZTI LLP in Makinsk was established in 2019 in Kazakhstan. Its investor is Baiterek Venture Fund JSC. Project cost amounted to 6,77 bln.KZT. Gamma Meccanica (Italy) is one of the world leaders among manufacturers of such equipment. High quality of products, manufactured at this equipment, is ensured by high degree of automation of production, and, respectively, reduction of influence of human factor in production process. Mineral wool based on volcanic stone of basalt rocks, able to withstand temperatures without melting to 1000 °C. Products made of stone wool have heat and sound insulation properties due to the open porosity structure. The air contained in the pores of stone wool has a low thermal conductivity and is in a stationary state, which determines its excellent thermal insulation qualities. Due to the open porosity, rock wool is a vapor-permeable material, the vapor permeability is approximately 0.039-up to 0.046 W/m K

Oil production

1a Severniy promuzel, Ust-Kamenogorsk

+7 (7232) 23 12 76

www.maslozavod.kz

ukmz@yandex.ru

Company profile

Ust-Kamenogorsk oil plant LLP takes the leading positions for production of refined sunflower oil and belongs to the start-up and modern processor of sunflower seeds. Construction of the first line of the oil plant was started in 2004. Preparation and press workshop was put into operation in 2006. The second line of the oil plant: workshop of oil refining and deodorization was launched in 2009.

The oil plant is located in Ust-Kamenogorsk in the East Kazakhstan region. It has own infrastructure, including elevator complex of storage of sunflower seeds, hulling and drying departments, modern laboratory, automated weight station, boiler room.

Step-by-step expansion of capacity of the plant was required for establishment of such highly efficient production. Initially, a workshop was opened for the production of raw vegetable oil, then for deodorization cooking oil

Seven Refractories Asia LLP

Production of refractory materials

Company profile

Seven Refractories LLP is an international leader in the production of refractory monolithic materials and offers a wide range of products to its customers around the world. The plant in Kazakhstan was opened in 2017 and is the first enterprise in the country that produces such high-quality materials. The production volume is up to 45 thousand tons per year. Monolithic refractory material is the latest achievement in lining.

It supplies ferrous metallurgy enterprises with materials for blast furnaces, heating furnaces, ladles and filling devices, as well as environmentally safe fire-resistant flying masses. It offers cutting-edge solutions for the steel industry that promote rapid technological development: from traditional bricks to the latest monolithic materials for steel ladles. Now the region is provided with the most technically advanced fire-resistant materials. Products are also supplied abroad

Beer producing plant

238 Kairbekova Street, Kostanay

+7 (71431) 5 23 71

www.arsn.com.kz

rud-arasan@mail.ru

Company profile

The plant was built in 1897, by a Swiss citizen A.P.Lorenz. the largest plant for the production of beer in the southern Urals region and on the territory of present-day Kazakhstan, which was bottled in specially produced branded bottles, which at that time was a rarity. The products of A.P.Lorenz gained instant popularity and were awarded honorary medals at international exhibitions, for example, the brand "Eastern Bavaria" won the first place in Italy in 1905.

Kostanay brewery can be proud of the century-old history of its almost continuous existence, and in 2000 it was founded on the basis of **Arasan Firm LLP**. The company has preserved the classic method of open fermentation, and recreated historical recipes-Eastern Bavaria and Viennese. Rudnensky brewery was built and put into operation in December 1972. In February 2000, the plant was acquired by **Arasan Firm LLP**.

AMANAT Trading House LLP

Production of instant noodles

1/7, 40 let Oktyabrya str, Rudny

+7 (707) 632 98 00

tdamanat@mail.ru

Company profile

In 2012, the company was the first in Kazakhstan to produce instant noodles in Rudny. Today, the trademark of **AMANAT Trading House LLP** can be found on the shelves of many stores, both in Kazakhstan and abroad. **AMANAT Trading House LLP** is engaged in the production of pasta and instant noodles of the brands "Grito", "Swallow", "Lazzat", "Our Cup" and "Master Kan". All products are certified Halal, which is approved by the Muslim clergy. Kazakhstan's content in our products is not less than 90%, due to grain grown on our land and flour ground from it. The noodles that we produce are without a doubt a unique product, not like the one that is already present on the market, our noodles are one of those rare products that are produced according to GOST.

At the beginning of 2018, we launched a new project "Instant mashed potatoes" of the Grito brand with several flavors: grilled chicken with onions; homemade milk; sausages with breadcrumbs, as well as more than 5 types of garnish noodles for quick cooking of the Grito brand. The breakthrough was the release of the famous ramen Yakuza noodles, the noodles were made according to all the canons of Japanese culture, the sharp aromatic taste of the noodles carries back to the origins of the original ramen noodles

OMS SHIPPING LLP

Vessels for offshore drilling rigs

Company profile

OMS Shipping LLP is a young dynamically developing shipping company that was founded in 2007 to provide fleet support services for offshore oil operations in the Kazakhstan sector of the Caspian sea. The main goal of the company is to create a support fleet to support marine operations in the Kazakh sector of the Caspian sea. In the period from 2007 to 2011, the company successfully built a modern fleet - 8 barge units, 3 multifunctional tugs. In addition to "Neptune" and "Mercury", **OMS SHIPPING LLP** has three more tugs. A tug is a self-propelled vessel for towing and tipping other vessels and floating structures. Unlike other types of vessels, one of the most important characteristics for a tug is not speed, but thrust or thrust, that is, the force with which it can affect the vessel being moved. A distinctive feature of tugs is that they are relatively small in size and have a low sitting. Vessels of **OMS Shipping LLP** meet all modern requirements, they can be operated all year round. Tugs are equipped with fire extinguishing equipment on other vessels, floating and coastal objects. The power of the two main engines of each tug is 880 kW. The vessels are designed for towing non-self-propelled barges with a displacement of up to 4,000 tons at a speed of up to five knots, for moving vessels in the water area of ports and installing them at berths, for participating in rescue operations

Prommashkomplekt LLP

Production of railway wheels

Company profile

Kazakhstan plant for the production of railway wheels. Date of commissioning: 2012. The machine-building complex is the leading inter-industry complex. The technical capabilities of the plant allow us to produce high-quality, safe, competitive products, quickly respond to changing consumer demands with minimal time and resources.

Since October 19, 2015, the plant has implemented the IRIS standard. The international standard IRIS is used as a business management tool that allows continuous improvement, with particular emphasis on preventing and reducing the number of defects in the railway equipment supply chain.

On December 11, 2018, the 2nd stage of the Complex for the production of wheels for the railway was launched. The newly commissioned Complex can produce all-rolled railway wheels of various diameters and disc designs - from 700 to 1,250 mm. All this expands the production opportunities for exporting products to the near and far abroad

Company profile

Dikanshy Firm LLP was founded in 2001. The main activity is the export of grain products and products of its processing. Countries where deliveries are made: Tajikistan, Afghanistan, Turkmenistan, Uzbekistan, Russia. In 2009, a modern production mill complex with a capacity of up to 110 tons of wheat per day was launched on its own territory in the city of Petropavlovsk. In the following years, the complex is developed and improved, which allows to improve the quality of products. By annually upgrading its facilities, it ensures its development and increases the range of capabilities. In 2015, a complex of acceptance, storage, drying and processing of various agricultural crops was put into operation. Today, the brand of **Dikanshy Firm LLP** combines a number of activities: trading of grain and oilseeds, their processing, as well as providing logistics services to the countries of the near and far abroad. The production is equipped with equipment that allows to ship products in various packages (bags, Big-Bag) by road and rail (grain carriers, covered wagons), both from the existing railway dead end, and from elevators and unloading places throughout the territory of the Republic of Kazakhstan

RakhatOpt LLP

Production of flour industry products, starches and starch products

Company profile

RakhatOpt LLP was registered on 21.04.2014. The company has a strong position in the market of the North Kazakhstan region in wholesale sales of cereals, such as: millet, buckwheat, flour, rice, corn groats and others. Having its own flour production and experience in sales of cereals, also due to the lack of market for the production of quality cereals in the region, the company decided to carry out the production of food cereals independently

Types of state support

Ertegi LLP

Flour production

Company profile

The main activity of **"Ertegi" LLP** is production of high-quality flour of all varieties, the sale of grain and grain waste, as well as the purchase, drying and part-time work of grain crops, including for export. In 2011, the company started its commercial activities with the sale of grain and flour. In 2012, the mill complex was purchased at its own expense. Later, silo, electronic railway and automobile scales were built for acceptance, storage and shipment by rail. Our own railway dead end with silos made it possible to simplify the shipment procedure. Taking into account the demand for manufactured products, since 2014 the company has been constantly upgrading its production
